Aerodyne Industries LLC announces partnership with Jet Propulsion Laboratory

CAPE CANAVERAL, FL — Aerodyne Industries LLC is proud to announce a partnership with the Jet Propulsion Laboratory (JPL) to support a critical project for the Deep Space Network (DSN) at the Goldstone Deep Space Communication Complex (GDSCC) in Barstow, CA.

The Deep Space Network is NASA's international array of giant radio antennas that support interplanetary spacecraft missions, plus a few that orbit Earth. The DSN also provides radar and radio astronomy observations that improve our understanding of the solar system and the larger universe.

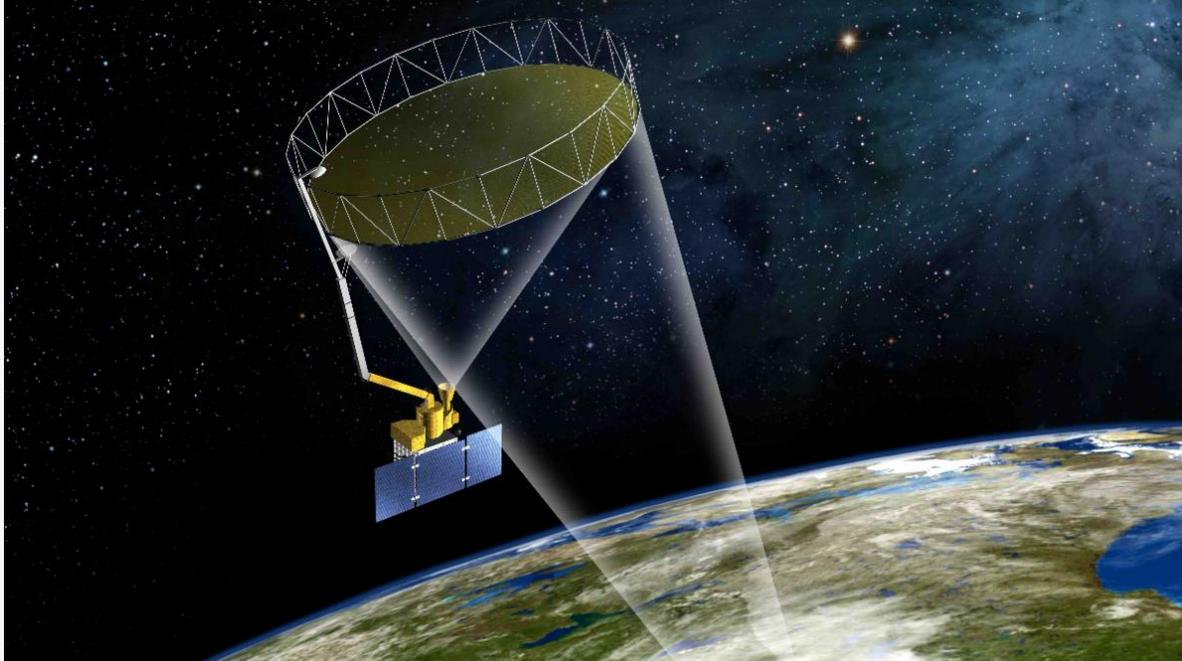

Aerodyne won a prime contract for the build and delivery of a 34-meter dish diameter antenna (ref. RFP NP 2661- 1022797).

Aerodyne Industries LLC is a Service-Disabled Veteran-Owned Small Business (SDVOSB) that was established in 2006 by CEO Andrew "Andy" Allen. We are headquartered in Cape Canaveral, FL with a primary focus on serving NASA programs and resolving NASA's most challenging technical issues.

A seasoned business executive and program manager, Mr. Allen is a former Marine aviator who has logged more than 6,000 flight hours in more than 30 different aircraft. He is also a veteran NASA astronaut, Space Shuttle Pilot and Mission Commander.

"Aerodyne is proud to be able to expand our support of NASA's manned and unmanned missions with the Jet Propulsion Laboratory," said Andy Allen. "We understand and appreciate the history of the Goldstone Complex, which has provided a vital communication link for more than fifty years, and we look forward to supporting new milestones in space exploration in the 21st century."
